DETAILED ACTION

Election/Restrictions

1. Applicant's election of Species II, claims 6-10, in the reply filed on 2/28/06 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 6-10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamamoto et al., U.S. Pat. No. 6,916,563 B2.

Rejection of claims 6-10 drawn to a hydrogen purge control apparatus.

Yamamoto et al., teach a fuel cell stack from which hydrogen is purged as necessary (col. 2, lines 3-8), a purged hydrogen dilution device disposed downstream of fuel cell stack, and which includes a chamber (Fig. 2; ref. 5), a first inlet for allowing purged hydrogen to flow into the chamber (Fig. 2, ref. 11), a second inlet for allowing air to flow into the chamber (Fig. 2, ref. 12), and an outlet for discharging diluted hydrogen from the chamber (Fig. 2, ref. 13); a regulator for regulating amount of purged hydrogen flowing into purged hydrogen dilution device and a control unit connected to regulator (col. 7, lines 13-24), which includes a hydrogen concentration estimating section to

estimate concentration at outlet of purged hydrogen dilution device based on operating state of fuel cell stack (col. 7, lines 25-58).

Thus, the invention as a whole would have been obvious to one of ordinary skill in the art at the time the invention was made because although claims 6-10 recite "control unit is adapted to...", it has been held that the recitation that an element is "adapted to" perform a function is not a positive limitation but only requires the ability to so perform. It does not constitute a limitation in any patentable sense. *In re Hutchison*, 69 USPQ 138.

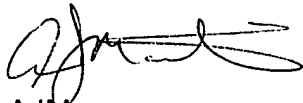

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Hamada et al., JP 11-191422, teach a fuel cell system which purges hydrogen through a control apparatus.
